

IN THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1-8. (Canceled)

9. (Currently Amended) An information processing apparatus that processes a plurality of pieces of data recorded on a ~~recording-non-transitory computer-readable~~ medium, comprising:

identification means for identifying encoding systems for the plurality of pieces of data in an edit for which they are connected and successively reproduced;

generation means for generating one management information file that manages the result of the edit so that the management information file contains a group name representing each of the plurality of encoding systems of the plurality of pieces of data that were used when the management information file was edited and recording the management information file in a directory of the ~~recording-computer-readable~~ medium attachable and detachable to and from the information processing apparatus, the directory for the management information file being different from other directories of the ~~recording-computer-readable~~ medium; and

determination means for reading the management information file generated by the generation means and recorded on the ~~recording-computer-readable~~ medium and determining reproducibility of all the plurality of pieces of data according to the group name contained in the

management information file when the plurality of pieces of data are reproduced as the result of the edit.

10. (Currently Amended) An information processing method for an information processing apparatus that processes a plurality of pieces of data recorded on a ~~recording non-transitory computer-readable~~ medium, the method comprising the steps of:

identifying encoding systems for the plurality of pieces of data in an edit for which they are connected and successively reproduced;

generating one management information file that manages the result of the edit so that the management information file contains a group name representing each of the plurality of encoding systems of the plurality of pieces of data that were used when the management information file was edited and recording the management information file in a directory of the ~~recording computer-readable~~ medium attachable and detachable to and from the information processing apparatus, the directory for the management information file being different from other directories of the ~~recording computer-readable~~ medium; and

reading the management information file generated at the generation step and recorded on the ~~recording computer-readable~~ medium and determining reproducibility of all the plurality of pieces of data according to the group name contained in the management information file when the plurality of pieces of data are reproduced as the result of the edit.

11. (Previously Presented) A recording medium on which a program has been recorded, the program being readable by a computer, the program being used for an information

processing apparatus that processes a plurality of pieces of data recorded on a recording medium,
the program comprising the steps of:

identifying encoding systems for the plurality of pieces of data in an edit for
which they are connected and successively reproduced;

generating one management information file that manages the result of the edit so
that the management information file contains a group name representing each of the plurality of
encoding systems of the plurality of pieces of data that were used when the management
information file was edited and recording the management information file in a directory of the
recording medium attachable and detachable to and from the information processing apparatus,
the directory for the management information file being different from other directories of the
recording medium; and

reading the management information file generated at the generation step and
recorded on the recording medium and determining reproducibility of all the plurality of pieces
of data according to the group name contained in the management information file when the
plurality of pieces of data are reproduced as the result of the edit.

12. (Previously Presented) A program stored on a computer-readable medium, the
program causing a computer to execute a process, the computer controlling an information
processing apparatus that processes a plurality of pieces of data recorded on a recording medium,
the process comprising the steps of:

identifying encoding systems for the plurality of pieces of data in an edit for
which they are connected and successively reproduced;

generating one management information file that manages the result of the edit so that the management information file contains a group name representing each of the plurality of encoding systems of the plurality of pieces of data that were used when the management information file was edited and recording the management information file in a directory of the recording medium attachable and detachable to and from the information processing apparatus, the directory for the management information file being different from other directories of the recording medium; and

reading the management information file generated at the generation step and recorded on the recording medium and determining reproducibility of all the plurality of pieces of data according to the group name contained in the management information file when the plurality of pieces of data are reproduced as the result of the edit.
